REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance. The prior art made of record in the attached form PTO-892 considered to be pertinent to the submitted application.

Tsutsui US# 6,274,994 teaches a servo control apparatus in which a machine system is driven by a servo motor. Wherein the mechanical resonance suppressing filter is provided so as to suppress resonance and mechanical vibrations, produced by characteristic frequency owned by the machine system. The signal is obtained by adding a speed component to an actual motor speed.

Oyama et al. US # 6,993,990 disclose a method for controlling an electric motor provided with a pre-filter section having characteristics of lowered gain at a prescribed frequency and frequencies in the vicinity, and characteristics of limiting the gain in a high range.

However, none of the prior art teaches or suggests the claimed combination of limitations including:

- A multi-shaft electric motor control apparatus provided with a detector for detecting an operating amount of the machine;
- A signal processor for analyzing the frequency a frequency of a signal of the detector and outputting the frequency as a resonance frequency;
- An output device for changing a signal of the signal processor into a graph or a numeric value to be output;

Art Unit: 2837

- Wherein at least one command generator for giving the control command for transmitting a vibration to the machine to at least one of the electric motor control systems is provided to input signals of the detectors to the signal processors and to output them as resonance frequencies.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
